

Motherboard Selection and Installation Part 1

1. Identify 3 ways that you can keep record of the CMOS settings:
2. Why aren't flathead screws used often inside cases?
3. Which should you install first- the MoBO or the Drives?
4. True or False: The Power Supply is the first thing to take out in a Reassembly? What happens if you put case screws into the hole that are used for hard drive installation?
5. What is cross threading?

6. True or False: You can put an ATX Form Factor MB into a NLX Case
7. What is a component?
8. When selecting a MoBO, when do you not need a motherboard that has intergraded video?
